

London server hosting for your UK business websites

Website hosting tips to Rank & Bank in 2019!

If your **business is based in London** and you are catering to London based people who search online on Google for what you are offering, then hosting your business websites on a London based server is the best thing you can do.

A London based server can give your business website the optimal performance and speed when it comes to Loading time.

We've tested at [ClickDo](#), how speed impact SEO as well as the user experience of a website. And the results show that speed and user experience help SEO. So, giving the best possible performance for your business website will significantly help your bottom line > Sales via the website.

What is a London based server?

A London based server means your host is based in London and closest proximity for your business location. So, the speed it can reach your website files is at its highest.

We believe that having a host in the same city as where the business operates is the best you can give when it comes to the online performance of your website.

Why would you ever want to host your business websites in another city when your business is based in London, and your targeted audience is based in London.

At **ClickDo SEO agency in London**, we have tested London server hosting in hundreds of websites that operate in London. You can read this case study on how changing the hosting helped the Payroll Services company website ranks on Google.

Also, we've got feedback from an Employment Lawyer on how hosting his websites on our London bases servers helped the budge on Google. You can see it on [ClickDo.co.uk](#) and [SeekaHost.co.uk](#)

What's the best when it comes to London web hosting?

There are many options when it comes to a **London web hosting service**, and you will be confused to pick the right London bases hosting for your business websites.

At SeekaHost, there are several business hosting plans.

1. London VPS hosting
2. London dedicated server
3. London server dedicated web hosting
4. London server cloud hosting

And if you are looking for a cheaper option there are shared hosting servers that are based in London. However, we do not recommend it for your business unless you can't afford any of the above mentioned three options.

It's worth to invest £20 to £67 per month for the top 2, and if you can go up to £100 plus per month, you can get the ultimate web hosting performance from a London server cloud hosting.

We work [amazon servers](#), and Kasun Sameera is an expert in setting up AWS cloud server deployments for business websites. It's advised you contact a *London web hosting services* expert to give you the best options.

If you are an agency that needs to host thousands of websites for SEO services or your client's sites, it's vital to get multiple IPs for your sites. SeekaHost offers up to 2000 unique IPs for websites. So, you can make sure all the websites are in unique IPs and nothing clashes.

SeekaHost offers the cheapest hosting for blogs, and they can be purchased from multiple London servers. So, if you are an agency looking for unique IPs in London based VPS or dedicated servers you can get in touch with SeekaHost technical advisers.
